Team: ByteClub

Project: Biconoir Restaurant

US-01: Customer Registration

Field	Details
Actor	New customer
History	As a new customer, I want to register on the platform so that I can place online orders.
Acceptance Criteria	• User accesses the registration page. • Enters mandatory data (name, email,

Field	Details
	phone). • The system validates data and prevents duplicates. • Successful registration is confirmed.
Business Value	Allows capturing customers and managing digital orders.
Priority	High
Status	Prioritized

US-02: View Detailed Menu

Field	Details
Actor	Customer
History	As a customer, I want to view the available menu with full details to choose products.
Acceptance Criteria	• A list of products is displayed with name, price, image, and description. • Only available products appear according to inventory.
Business Value	Improves the customer experience and transparency .

Field	Details
Priority	High
Status	Prioritized

US-03: Shopping Cart Management

Field	Details
Actor	Customer
History	As a customer, I want to add products to a shopping cart to manage my order before paying.
Acceptance Criteria	• Customer can add and remove products. • Can define quantities. • The cart persists during the session until the order is confirmed.
Business Value	Allows generating sales directly from the platform.
Priority	High
Status	Prioritized

US-04: Customize Order (Ingredient Removal)

Field	Details
Actor	Customer
History	As a customer, I want to remove specific ingredients from a product to avoid allergies or suit my taste.
Acceptance Criteria	• Product ingredients are displayed individually. • Customer can select which ingredients to remove. • Kitchen receives the order with these special instructions.
Business Value	Improves food safety and customer satisfaction.
Priority	High
Status	Prioritized

US-05: Order Total Calculation

Field	Details
Actor	System
History	As a system, I want to calculate the total order cost to show the final value to the customer.

Field	Details
Acceptance Criteria	• Subtotal is calculated based on products. • Fees (shipping or service) are added. • The total is displayed before payment.
Business Value	Avoids financial errors and improves transparency.
Priority	High
Status	Prioritized

US-06: Automatically Update Inventory

Field	Details
Actor	System
History	As a system, I want to deduct ingredients from the inventory when completing an order.
Acceptance Criteria	• Each product has an associated recipe. • The exact amount of ingredients is deducted. • Inventory is updated in real-time.
Business Value	Maintains precise stock control and financial accuracy.

Field	Details
Priority	High
Status	Prioritized

US-07: Inventory Order

Field	Details
Actor	System
History	As a system, I want to use the FIFO method to calculate ingredient usage.
Acceptance Criteria	• The oldest batches are consumed first. • The correct cost per batch is recorded.
Business Value	Allows correctly calculating profits.
Priority	Medium
Status	Prioritized

US-08: Register Ingredient Purchase

Field	Details
Actor	Administrator
History	As an administrator, I want to register ingredient purchases to update the inventory.
Acceptance Criteria	• Quantity, cost, and date are registered. • An SKU is assigned to the ingredient. • It is saved as an independent batch.
Business Value	Allows controlling supply and costs.
Priority	High
Status	Prioritized

US-09: View Order History

Field	Details
Actor	Administrator / Analyst
History	As an analyst, I want to consult the order history to evaluate performance.
Acceptance Criteria	• Completed orders are displayed. • Includes date, products, prices, and costs.

Field	Details
Business Value	Facilitates analysis and decision-making.
Priority	Medium
Status	Prioritized

US-10: Calculate Profits (Financial Reports)

Field	Details
Actor	System / Administrator
History	As a system, I want to calculate the profit or loss to measure business performance.
Acceptance Criteria	• PL is calculated (Price - Ingredient Cost - Fees). • Reports display Profit/Loss per Day (PLPD). • Administrator can view financial summaries.
Business Value	Allows evaluating business profitability.
Priority	High
Status	Prioritized

US-11: Table Reservation

Field	Details
Actor	Customer
History	As a customer, I want to reserve a table online to ensure my place at the restaurant.
Acceptance Criteria	• Customer selects date, time, and number of people. • The system checks availability and confirms the reservation. • A confirmation email or notification is sent.
Business Value	Organizes restaurant capacity and improves service.
Priority	High
Status	Prioritized

US-12: Location and Contact Map

Field	Details
Actor	User

Field	Details
History	As a user, I want to see the restaurant's location on a map and contact details to find or contact the place.
Acceptance Criteria	• An interactive map is displayed (e.g., Google Maps). • Contact information (email, phone, address) is clearly visible below the map.
Business Value	Facilitates customer arrival and communication.
Priority	Medium
Status	Prioritized

US-13: Admin Dashboard (Active Reservations)

Field	Details
Actor	Administrator
History	As an administrator, I want to see all active reservations to manage the dining room efficiently.
Acceptance Criteria	• Login distinguishes between "Normal Customer" and "Administrator".

Field	Details
	Administrator has a view of all scheduled and active reservations for the day.
Business Value	Centralizes operational control for the manager.
Priority	High
Status	Prioritized

US-14: Read-Only Audit Log

Field	Details
Actor	Administrator
History	As an administrator, I want to have a record of all system activities for security and auditing.
Acceptance Criteria	- System logs every transaction, order, and inventory change. - The administrator can view the logs but cannot modify or delete them. - Data includes timestamps and user IDs.
Business Value	Ensures transparency and prevents internal

Field	Details
	fraud.
Priority	High
Status	Prioritized
